

Migration + Management **ROI**

The Business Case for hyper2kvm & v9s

Quantifying the return on investment from VMware exit to KubeVirt with automated migration and web-based management.

For CFOs, VPs of Infrastructure, IT Directors

The **Cost** Problem

VMware licensing costs are unsustainable after Broadcom acquisition.

2-12x

License Cost Increase

\$0

Perpetual Licenses Left

Forced

Bundle Purchasing

Typical VMware Costs (100 VMs)

Item	Annual Cost	Notes
vSphere Standard (per CPU)	\$50,000 - \$150,000	Subscription-only since Broadcom
vCenter Server	\$15,000 - \$30,000	Required for management
vSAN / Storage	\$20,000 - \$60,000	Bundled, can't opt out
NSX / Networking	\$15,000 - \$40,000	Bundled in VCF
Support & Maintenance	\$20,000 - \$50,000	20-25% of license cost
Total Annual	\$120,000 - \$330,000	Per year, every year

The KVM **Alternative**

Open source KVM + KubeVirt eliminates vendor licensing entirely.

KubeVirt Stack Costs (100 VMs)

Item	Annual Cost	Notes
KVM Hypervisor	\$0	Built into Linux kernel
KubeVirt	\$0	Open source, CNCF project
Kubernetes (K3s/K8s)	\$0	Open source orchestration
hyper2kvm Migration	Contact for pricing*	Proprietary (HyperSDK)
v9s Management UI	\$0	Included, web-based
Linux OS (AlmaLinux/Rocky)	\$0	Enterprise Linux, free
Migration Engineering (one-time)	\$15,000 - \$30,000	Staff time for migration project
Optional: RHEL Support	\$5,000 - \$15,000	If commercial Linux support desired
Year 1 Total	\$15,000 - \$45,000	One-time migration + optional support
Year 2+ Total	\$0 - \$15,000	Optional support only

ROI Calculation

3-year total cost of ownership comparison.

Metric	VMware (3yr)	KubeVirt (3yr)	Savings
Licensing	\$360K - \$990K	\$0	\$360K - \$990K
Migration	\$0	\$15K - \$30K	-\$30K
Management Tool	Included (vCenter)	\$0 (v9s)	\$0
Optional Support	Included	\$0 - \$45K	Varies
Hardware	Same	Same	\$0
3-Year Total	\$360K - \$990K	\$15K - \$75K	\$285K - \$915K

85-95%

Cost Reduction

3-6

Month Payback Period

10-20x

3-Year ROI

Operational Value

Beyond licensing savings — operational efficiency gains.

Faster Migration

hyper2kvm's VMCraft engine is 5-7x faster than traditional tools. Parallel batch processing. One command per VM. Automated fixes eliminate manual debugging.

Self-Service Management

v9s web UI enables team self-service. No kubectl expertise needed. Start/stop/console/snapshot from the browser. Reduces ops team ticket volume.

Built-in Monitoring

Real-time metrics per VM without Prometheus/Grafana setup. Host hardware inventory without SSH access. Reduces monitoring tool costs.

No Vendor Lock-in

All open source. No contract negotiations. No forced upgrades. No bundle purchasing. Freedom to choose support vendors or self-support.

Time Savings per VM

Activity	Manual / virt-v2v	hyper2kvm + v9s	Savings
Migration + fixes	2-4 hours	15-30 minutes	75-85%
Boot troubleshooting	1-3 hours	0 (first-boot success)	100%

Console access setup	30 min (SSH keys, VPN)	2 clicks (browser)	95%
VM monitoring setup	1-2 hours (Prometheus)	0 (built-in)	100%
Snapshot management	CLI commands	1 click	90%

Investment Summary

What you get with hyper2kvm + v9s.

hyper2kvm

- 8 input formats
- 35+ OS support
- 480+ VMCraft APIs
- Parallel batch
- LUKS/LVM
- K8s native deploy

v9s

- Web management UI
- VNC/Serial/SSH console
- Real-time metrics
- Snapshot management
- Host hardware inventory
- ISO mount, add network

ROI

- 85-95% cost reduction
- 3-6 month payback
- No vendor lock-in
- Proprietary (HyperSDK) license
- Self-service operations
- Built-in monitoring

Start your VMware exit today

Migrate with confidence. Manage with ease. Save 85-95% on virtualization costs.

hyper2kvm + v9s: the complete alternative to VMware.

hyper2kvm + v9s — Migration + Management ROI
