

Funding Proposal

hyper2kvm Ecosystem

VM Migration & Management Platform

\$72,000

6-Month Development & Commercialization Program

Four integrated products creating a complete VMware exit solution: hyper2kvm (migration), v9s (web management), virtcraft (KubeVirt CLI), hypersdk (multi-cloud export daemon).

Seed Funding Request — April 2026

The Opportunity

\$85B virtualization market disrupted by Broadcom's VMware acquisition.

\$85B

Global Virtualization Market

2-12x

VMware Price Increase

500K+

VMware Customers Seeking
Exit

Broadcom Licensing Shock

VMware customers face 2-12x cost increases. Perpetual licenses eliminated. Forced bundle purchasing. Enterprises urgently seeking alternatives.

KVM Platform Rising

KVM is the Linux kernel's built-in hypervisor. KubeVirt brings VMs to Kubernetes. The technology is ready — tooling is the gap.

The Gap We Fill

No end-to-end solution exists for: export from any cloud → migrate with automated fixes → manage via web UI. We built all four pieces.

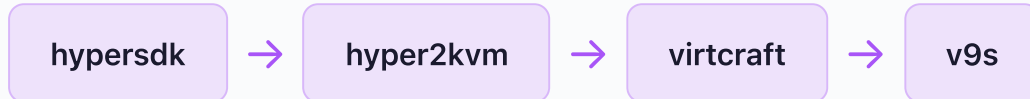

Growing Traction

10K+ PyPI downloads. 1,483 tests passing. 67 client presentations. Production-deployed on bare metal. Active GitHub community.

Product Portfolio

Four integrated products covering the complete VM lifecycle.

hypersdk

Multi-Cloud VM Export Daemon

Go-based hexagonal architecture. 10 cloud providers (VMware, AWS, Azure, GCP, Alibaba, etc.). Daemon mode with job scheduling. REST API + gRPC. 8 binaries.

Stage: Production-ready. Systemd service. Helm chart.

hyper2kvm

VM Migration Toolkit

Python + VMCraft engine (480+ APIs). 8 input formats. 35+ OS support. Automated offline fixes (GRUB, fstab, VirtIO, initramfs). 5-7x faster than virt-v2v.

Stage: PyPI published. 10K+ downloads. 1,483 tests.

virtcraft

KubeVirt CLI Manager

Rust-based CLI for KubeVirt VMs. Templates, profiles, blueprints, snapshots. Interactive TUI dashboard. Shell completions. Single binary.

Stage: Functional. Deployed on production server.

v9s

KubeVirt Web Management Platform

Rust (Axum) + React. VNC/Serial/SSH console. Real-time WebSocket metrics. Snapshots, ISO mount, network management. Host hardware inventory.

Stage: Production. Live at <https://185.165.240.5:5050>

Traction & Metrics

What's been achieved with zero external funding.

Metric	hyper2kvm	hypersdk	v9s	virtcraft
Language	Python	Go	Rust + React	Rust
Tests	1,483	Full suite	Build passing	54 + 8 doc
Downloads	10K+ (PyPI)	GitHub	Self-hosted	GitHub
Documentation	67 presentations	API docs	In-app	CLI help
Cloud Providers	8 formats	10 providers	KubeVirt	KubeVirt
OS Support	35+ versions	N/A	N/A	41 templates
Production Deploy	✓	✓	✓	✓

Technical Achievements

VMCraft Engine

480+ APIs. Pure Python. 5-7x faster than guestfs. 0.71s LVM activation. Zero C dependencies.

Hexagonal Architecture

hypersdk: clean domain/port/adaptor separation. 10 cloud

Security Hardened

70+ security fixes. Command injection prevention. LUKS/TPM2.

providers with
identical interface.

Systemd hardening.
RBAC.

Budget Breakdown

6-month funding request: \$72,000 USD

\$72,000

Total Funding Request — 6 Months

Category	Monthly	6 Months	Details
Developer Salary	\$4,800	\$28,800	Lead developer — full-time, all 4 projects
Hardware: Lenovo ThinkPad X1 Carbon (x2)	—	\$4,800	2 laptops for development + testing. 32GB RAM, 1TB SSD each.
Dedicated Server (India DC)	\$120	\$720	Production server for KubeVirt cluster, CI/CD, live demos (10,000 INR/mo)
Claude AI Subscription	\$200	\$1,200	Claude Max (\$200/mo x 6) for AI-assisted development, code generation, docs
Azure Subscription	\$300	\$1,800	Azure VMs for Hyper-V testing, Azure VHD export validation, CI/CD
AWS Subscription	\$300	\$1,800	EC2 for AMI export testing, S3 for artifacts, EBS snapshot validation
Bare Metal Infrastructure	\$360	\$2,160	Hetzner/OVH dedicated servers. KubeVirt cluster. Demo environments.

VMware vSphere Lab	\$180	\$1,080	VMUG Advantage or vSphere evaluation for migration testing
Domain, SSL, CDN	\$60	\$360	Project websites, documentation hosting, package distribution
Conference & Marketing	—	\$3,600	KubeCon, DevConf, FOSDEM. Stickers, swag, travel.
Legal & Compliance	—	\$1,200	Trademark registration, license review, contributor agreements
SUBTOTAL		\$47,520	Core development + infrastructure
Reserve Fund	—	\$24,480	Runway extension, hiring, partnership development, contingency
GRAND TOTAL		\$72,000	Complete 6-month program

6-Month Roadmap

Deliverables and milestones for each month.

M1

Foundation & Infrastructure

Set up CI/CD pipelines for all 4 projects. Unified documentation site. Hardware procurement (2x Lenovo X1). Automated release system. Project websites live.

M2

hyper2kvm v1.0 Release

Polish VMCraft engine. Windows migration GA. Parallel batch improvements. Official v1.0 release on PyPI. Enterprise documentation. Video tutorials.

M3

hypersdk v1.0 + v9s GA

hypersdk: all 10 providers tested. Dashboard UI. Helm chart in ArtifactHub. v9s: multi-node support, RBAC, persistent events, metrics history.

M4

Integration & Enterprise Features

End-to-end pipeline: hypersdk export → hyper2kvm fix → virtcraft/v9s manage. LDAP/SSO auth. Audit logging. Multi-cluster support.

M5

Community & Partnerships

KubeCon presentation submission. Partner MSP program. Community contributor onboarding. Blog posts. Conference demos. Case study documentation.

M6

Commercial Launch

Enterprise support tier. SaaS management portal. Customer PoC program. Revenue pipeline. Series A preparation with traction metrics.

Competitive Landscape

How we compare to existing solutions.

Capability	virt-v2v (Red Hat)	MTV (Red Hat)	hyper2kvm Ecosystem
Migration Engine	C (guestfs)	Containerized	✓ Python VMCraft (5-7x faster)
Cloud Export	Limited	VMware only	✓ 10 providers (hypersdk)
Web Management	None	OCP Console	✓ v9s (standalone)
CLI Tool	Basic	kubectl	✓ vircraft (dedicated)
Windows VirtIO	Basic	Basic	✓ Full PnP + Registry
Live Fix	No	No	✓ SSH zero-downtime
LUKS/LVM	Partial	No	✓ Full + TPM2
Console (sendkey)	No	OCP only	✓ VNC + Serial + SSH
License	GPL	Requires OCP	✓ Proprietary (licensed)
Cost	Free (needs guestfs)	\$\$\$\$ (OCP license)	✓ Competitive licensing + support

Key Differentiator

We are the **only solution** that provides the complete pipeline: multi-cloud export (hypersdk) → automated migration with offline fixes (hyper2kvm) → KubeVirt CLI

management (virtcraft) → web-based monitoring & operations (v9s). All integrated.
All built by one team.

Revenue Model

Path to sustainability and growth.

Enterprise Support

Annual support contracts for enterprises using the platform. SLA-backed response times, priority bug fixes, migration planning assistance.

Target: \$2.4K-6K/customer/year

MSP/Partner Program

Enable managed service providers to offer migration-as-a-service. Revenue sharing model. Training and certification program.

Target: 10-20 partners in Y1

Training & Consulting

Migration planning workshops. On-site migration execution. KubeVirt architecture consulting. Custom integration development.

Target: \$6K-12K/engagement

SaaS Management Portal

Hosted v9s + hypersdk for multi-cluster management. Per-VM or per-cluster pricing. Migration orchestration dashboard.

Target: \$1.2K-6K/cluster/year

12-Month Revenue Projection

Quarter	Revenue Stream	Target
Q1 (M1-3)	PoC engagements, conference visibility	\$0 (building pipeline)
Q2 (M4-6)	First enterprise support contracts	\$6K-12K
Q3 (M7-9)	MSP partnerships, training revenue	\$18K-30K
Q4 (M10-12)	Recurring support + SaaS launch	\$36K-60K

Year 1 Total

\$60K - \$102K

Founding Team

Proven engineers with deep Linux and virtualization expertise.

Susant Sahani

Founder & Lead Developer

Background: Senior Software Engineer with 10+ years in Linux systems, networking, and virtualization. Former contributor to systemd, NetworkManager, and enterprise Linux distributions.

Key Contributions:

- Built all 4 products (hyper2kvm, v9s, virtcraft, hypersdk) as a solo developer
- 480+ VMCraft API methods — pure Python VM manipulation engine
- 10 cloud provider integrations in hypersdk (Go)
- Full-stack: Python, Rust, Go, React, TypeScript
- Deep systemd expertise — 20 systemd tools integrated
- Active maintainer and developer on GitHub

github.com/ssahani

Sibu

Co-Founder & Engineer

Background: Software engineer with expertise in infrastructure, DevOps, and cloud-native systems. Brings complementary skills in testing, deployment automation, and customer-facing operations.

Key Responsibilities:

- QA, testing, and validation across all 4 products
- CI/CD pipeline management and release engineering
- Customer PoC execution and technical support
- Documentation, tutorials, and training materials
- Infrastructure management (servers, cloud accounts)
- Community engagement and partner onboarding

Why This Team

Already Built It

4 production products. 1,500+ tests. 68 presentations. Live deployment. Zero external funding. Proven execution.

Deep Linux DNA

systemd, KVM, libvirt, QEMU, KubeVirt, Kubernetes — native expertise in every layer of the stack.

Full Stack

Python + Rust + Go + React + TypeScript. Backend, frontend, CLI, daemon, API, and infrastructure. No gaps.

Risks & Terms

Transparent risk assessment and investment structure.

Risk Mitigation

Risk	Severity	Mitigation
Key person dependency	High	Second team member (Sibu) provides redundancy. Comprehensive documentation and knowledge sharing. Full IP ownership.
Software monetization	Medium	Proven model: enterprise licensing + SaaS + consulting. Multiple revenue streams from day one.
Competition from Red Hat	Medium	Red Hat's MTV requires full OpenShift (\$\$\$). virt-v2v is limited. We are faster, broader, and free. Different market segment.
Market timing	Low	Broadcom acquisition is <i>accelerating</i> VMware exits. Timing is optimal — demand is growing, not shrinking.
Technical risk	Low	Products already work in production. This funding is for polish and commercialization, not R&D.

Investment Terms

Option A: Equity Investment

\$72,000 for 10-15% equity stake.
Standard SAFE note or priced round.
Pro-rata rights for follow-on.

Best for: VCs, angel investors seeking upside.

Option B: Revenue-Based Financing

\$72,000 repaid as 10% of monthly revenue until 1.5x returned (\$108K cap). No equity dilution.

Best for: Revenue-focused investors.

Option C: Grant / Sponsorship

\$72,000 as development grant. Logo placement, advisory board seat, early access to enterprise features.

Best for: Foundations, corporate sponsors (Linux Foundation, CNCF).

Option D: Strategic Partnership

\$72,000 from a cloud/infrastructure company. Co-development agreement. Joint go-to-market. Technology integration.

Best for: Cloud providers, hosting companies, MSPs.

See It Live

Working products you can try right now.

v9s Live Demo

<https://185.165.240.5:5050>

Running on bare metal. KubeVirt v1.8.0
on K3s.

Real VMs. Real metrics. Real console
access.

Install hyper2kvm

```
pip install  
hyper2kvm
```

Available on PyPI. One
command install.
10,000+ downloads.
Licensed software.

\$72,000 to build the complete VMware alternative

One developer. Four products. Six months. The complete VMware exit platform.

The market is \$85B. The timing is now. The technology is proven.
