

Competitive Analysis

VM Migration Tools Comparison

hyper2kvm + hypersdk vs Red Hat MTV, AWS Application Migration Service, Azure Migrate, virt-v2v, and Carbonite Migrate. Feature-by-feature, cost-by-cost.

Feature Matrix

Comprehensive comparison across all major migration tools.

Capability	hyper2kvm + hypersdk	Red Hat MTV	virt-v2v	AWS SMS/MGN	Azure Migrate	Carbonite
VMware vSphere export	✓	✓	✓	✓	✓	✓
Hyper-V support	✓	Partial	✓	✓	✓	✓
AWS/Azure/GCP export	✓ (10 clouds)	✗	✗	AWS only	Azure only	Limited
Target: KVM/libvirt	✓	✗	✓	✗	✗	✗
Target: KubeVirt/K8s	✓	✓	✗	✗	✗	✗
Target: OpenShift	✓	✓	✗	✗	✗	✗
Interactive TUI	✓ (zkvm)	✗	✗	✗	✗	✗
YAML automation	✓	✓ (CRDs)	✗	JSON	ARM	✗
Offline guest fixes	✓ (VMCraft)	Limited	✓	✗	✗	✗
Windows VirtIO injection	✓	✓	✓	✗	✗	Agent
fstab/initramfs repair	✓	Basic	✓	✗	✗	✗
Boot verification	✓	✗	✗	✗	✗	✗
Batch/queue migration	✓	✓	✗	✓	✓	✓
Live progress streaming	✓	✗	✗	Console	Portal	GUI
Air-gap / offline	✓	Partial	✓	✗	✗	✗
Job scheduling	✓ (hypersdk)	✗	✗	✓	✓	✓
Carbon-aware scheduling	✓	✗	✗	✗	✗	✗

Cost estimation

Cost Comparison

Total cost of the migration tool itself — not the target platform.

Tool	License Cost	Requires	Lock-in Risk
hyper2kvm + hypersdk	\$0 (Apache 2.0)	Any Linux	None — open source, portable
Red Hat MTV	\$0 (with OpenShift sub)	OpenShift (\$50K+/yr)	Tied to OpenShift platform
virt-v2v	\$0 (GPL)	RHEL/Fedora	None — but limited features
AWS MGN	Free for 90 days, then \$\$/VM	AWS account	Locked to AWS cloud
Azure Migrate	Free tool, pay for Azure VMs	Azure account	Locked to Azure cloud
Carbonite Migrate	\$3,000-10,000/yr	Windows server	Proprietary, vendor-dependent

Key Differentiators

vs Red Hat MTV

MTV requires OpenShift (\$50K+/yr). hyper2kvm works on any Linux + any K8s (K3s, vanilla, EKS). MTV can't deploy to standalone KVM/libvirt. hyper2kvm does both.

vs virt-v2v

virt-v2v is CLI-only, no TUI, no batch queue, no KubeVirt deploy, no progress streaming, no pre-flight checks. hyper2kvm wraps virt-v2v capabilities and adds enterprise features.

vs AWS MGN / Azure Migrate

Cloud tools only migrate TO their cloud. hyper2kvm migrates FROM any cloud TO any target. Perfect for repatriation — the opposite direction cloud vendors want.

vs Carbonite

Carbonite costs \$3-10K/yr, requires Windows, GUI-only. No YAML automation, no KubeVirt, no air-gap support. hyper2kvm is free, Linux-native, fully automatable.

Why hyper2kvm Wins

The only tool that covers all migration paths with zero licensing cost.

Unique Capabilities (No Competitor Has All of These)

Capability	Why It Matters
10 cloud providers in one tool	Single learning curve for any source platform
KVM + KubeVirt dual target	Traditional and cloud-native from same pipeline
Interactive TUI (zkvm)	Guided migration for operators who don't know CLI
VMCraft offline engine	Guest fixes without booting VM — faster, safer
Carbon-aware scheduling	ESG compliance, green IT migration
Hexagonal architecture	Easy to add new providers, maintainable long-term
Apache 2.0 license	No vendor risk, no rug-pull, full code audit
