VM Migration Cost Savings Worksheet

Fill in your numbers to calculate exact savings from migrating VMware and cloud workloads to KVM/KubeVirt with hyper2kvm.

Step 1: Your Current Costs

Fill in your actual VMware and cloud spending. Use annual figures.

A. VMware Licensing (Annual)

Cost Item	Your Number	Typical Range
vSphere licenses (per-socket or per-core)	\$_____	\$5K-15K/ socket
vCenter Server license	\$_____	\$6K-10K
vSAN / storage licenses	\$_____	\$2K-8K/socket
NSX / network licenses	\$_____	\$4K-12K/ socket
Support & maintenance	\$_____	20-25% of license
Additional VMware products (Horizon, SRM, etc.)	\$_____	Varies
Total VMware Annual Cost	\$_____	

B. Cloud Spending (Annual, if applicable)

Cost Item	Your Number	Typical Range
Compute (EC2/Azure VMs/GCE)	\$_____	\$200-2K/VM/ mo
Storage (EBS/Blob/GCS)	\$_____	\$0.02-0.10/ GB/mo
Data egress / transfer	\$_____	\$0.09/GB
Reserved instance premiums	\$_____	30-60% of on- demand
Total Cloud Annual Cost	\$_____	

C. Operations (Annual)

Cost Item	Your Number	Typical Range
VMware admin FTEs (salary + benefits)	\$_____	\$100K-150K/ FTE
Training & certification	\$_____	\$3K-10K/ person
Total Ops Annual Cost	\$_____	

Step 2: Your Migration Costs

One-time investment to migrate. Typically recovered in 2-6 months.

D. Migration Investment (One-Time)

Cost Item	Your Number	Typical Range
New hardware (if needed)	\$_____	\$0 (reuse) - \$50K
KVM/K8s training for team	\$_____	\$5K-20K
Migration labor (internal or consulting)	\$_____	\$10K-50K
Parallel run period (keep VMware 30-90 days)	\$_____	1-3 months of license
hyper2kvm license	\$0	\$0 (open source)
Total Migration Investment	\$_____	

E. New Annual Costs (KVM/KubeVirt)

Cost Item	Your Number	Typical Range
KVM/libvirt licensing	\$0	\$0
KubeVirt licensing	\$0	\$0
OS subscription (RHEL optional)	\$_____	\$0-800/host/yr
Hardware maintenance	\$_____	Same as current
Linux/K8s admin FTEs	\$_____	Often same team
Total New Annual Cost	\$_____	

Step 3: Calculate Savings

Plug in your totals from Steps 1-2.

F. Annual Savings

Calculation	Your Number	Formula
Current total annual cost	\$_____	$A + B + C$
New annual cost (KVM/KubeVirt)	\$_____	E
Annual Savings	\$_____	$= (A+B+C) - E$

G. ROI & Payback

Metric	Your Number	Formula
Migration investment (one-time)	\$_____	D
Annual savings	\$_____	F
Payback Period (months)	_____ mo	$= D / (F / 12)$
3-Year ROI	_____ %	$= ((F \times 3) - D) / D \times 100$
3-Year Net Savings	\$_____	$= (F \times 3) - D$

2-6

Typical payback
period (months)

500-1000%

Typical 3-year
ROI range

\$0

hyper2kvm
license cost

Quick Reference Examples

Pre-calculated scenarios for common enterprise sizes.

Small (25 VMs, 2 hosts)

Metric	VMware	KVM	Result
Annual cost	\$45,000	\$5,000	Save \$40,000/yr
Migration cost	—	\$8,000	One-time
Payback	2.4 months		
3-year savings	\$112,000		

Medium (100 VMs, 8 hosts)

Metric	VMware	KVM	Result
Annual cost	\$280,000	\$25,000	Save \$255,000/yr
Migration cost	—	\$35,000	One-time
Payback	1.6 months		
3-year savings	\$730,000		

Large (500 VMs, 40 hosts, 10 sites)

Metric	VMware	KVM	Result
Annual cost	\$1,400,000	\$120,000	Save \$1,280,000/yr
Migration cost	—	\$100,000	One-time
Payback	0.9 months		
3-year savings	\$3,740,000
