

Eliminate VMware Licensing. Save **70%** on VM Infrastructure.

Open source migration platform that moves your VMs from VMware, Hyper-V, and cloud to KVM/libvirt and Kubernetes — fully automated, zero vendor lock-in.

The Problem

Broadcom's VMware acquisition has increased licensing costs 2-12x. Perpetual licenses are eliminated. Enterprises face a choice: absorb massive cost increases or migrate to open alternatives. The longer you wait, the more you pay.

The Solution

hyper2kvm + hypersdk is a two-layer platform that exports VMs from any source (VMware, AWS, Azure, GCP, Hyper-V), converts disk formats, applies offline guest fixes (drivers, boot config, fstab), and deploys to KVM/libvirt or KubeVirt on Kubernetes. One tool, every migration path.

What You Get

- Automated VMware-to-KVM migration
- Windows + Linux guest support
- KubeVirt / Kubernetes deployment
- Interactive TUI + YAML automation
- Pre-flight validation + boot verification

What You Save

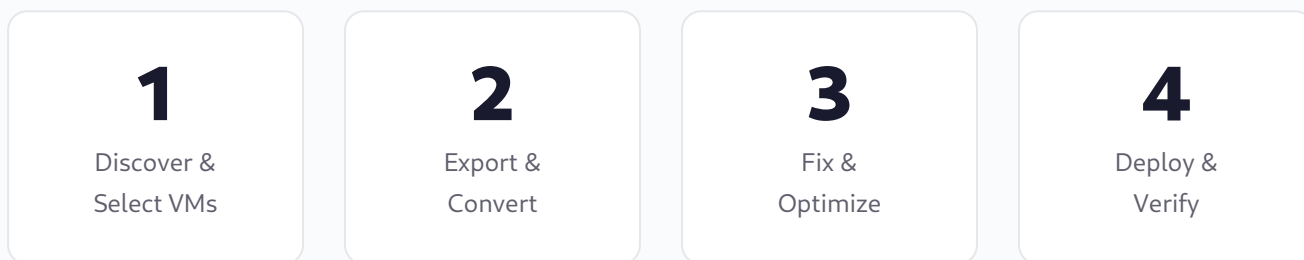

- 25 VMs: **\$112K** over 3 years
- 100 VMs: **\$730K** over 3 years
- 500 VMs: **\$3.74M** over 3 years
- Payback period: **1-3 months**
- Zero ongoing license fees

- Batch processing for hundreds of VMs

- No vendor lock-in risk

hyper2kvm + hypersdk | Apache 2.0 Open Source | github.com/ssahani/hyper2kvm

How It Works

Connect to vCenter, select VMs, and hyper2kvm handles everything: export via govc/OVF, convert VMDK to qcow2, rebuild initramfs with virtio drivers, fix fstab/GRUB, and deploy to libvirt or KubeVirt. Automatic boot verification confirms every VM starts correctly.

Proven Results

Financial Services

350 VMs migrated in 6 weeks. \$1.2M annual savings. 99.7% first-boot success. Windows SQL Server + Linux mixed environment.

Healthcare (HIPAA)

80 VMs repatriated from Azure. \$720K annual savings. 100% HIPAA compliant — all processing on-premises, zero cloud dependency.

Manufacturing (Edge)

45 factory sites migrated to K3s + KubeVirt. \$450K annual savings. Zero on-site IT visits — GitOps managed from HQ.

Government (Air-Gapped)

120 VMs on classified network. \$800K annual savings. Fully offline migration — no internet required at any stage. FedRAMP/FISMA compliant.

Next Steps

Free Assessment

We connect to your vCenter (read-only), inventory all VMs, and deliver a migration complexity report with projected savings. Takes 1 hour. No commitment.

Proof of Concept

Pick 3-5 VMs. We migrate them live. You verify they boot and run. Takes 2 hours. Zero risk to production. See the savings for yourself.

Ready to Start?

hyper2kvm is open source and ready for production today. No license purchase required.
