3. Providers — Multi-Cloud VM Discovery

3 dedicated provider cards with gradient headers, login forms, and integrated VM browser after connecting.

4. Migration Wizard — Source Selection

4 source types: Local File browser, VMware vSphere, Azure, EC2. 3-step wizard with full YAML config.

5. Job Monitor — Live Logs & Deployment

Real completed migration: Ubuntu Server 25.04 — LVM detected, initramfs rebuilt, deployed to libvirt with IP.
